Dettagli e orsendazioni conclusible

\_ Trave d' impaccato relicolare (Sap2K)

A S|X  $20 \downarrow b$   $3 \downarrow b$   $M_{R, SX}(Q) = -N_{20}b + F(b+3b) - 3F. 4b = 0$ 

$$M_{R, SX}(Q) = -N_{20}b + F(b+3b) - 3F.4b = 0$$

$$N_{Z0} = (4 - 12)F = -8F = -8 \times 14 + 400$$

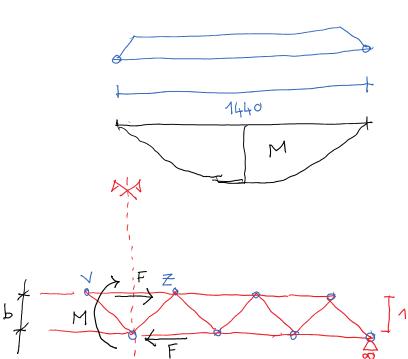

$$= -115200$$
Verifica ok

$$N_{VZ} = 129600 \text{ dol}$$

$$0 = \frac{N}{J} = \frac{129600}{33.63} = 3854$$
marsimo volore di 6 dovurre unu  $\frac{f_{YK}}{S} = \frac{2750}{2} = 1375$ 

Nuova ratione: 
$$\phi 355.6/6.3$$
  $\theta = 69.13$ 

$$\sigma = \frac{129.600}{69.13} = 1874 > 1375$$

$$M = 60 \times 1440^{2}/8 =$$

$$= 9L^{2}/8 = 15500000$$

$$daN.cm$$

$$M = F b$$

$$F = \frac{M}{b} = \frac{15500000}{120} \approx 129000$$

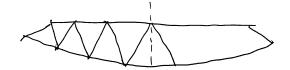

Per ridure F Levo annentare b

Per esempio 
$$b = 240$$

$$F' = \frac{M}{b'} = 64 500$$

L'annento di b et necessario Solo in promimità della

mistrio
