

# Energia primaria pro capite

Nell'edizione 2019 della Statistical Review of World Energy della BP compare, per la prima volta, il consumo di energia primaria pro capite.

Slide 1: Tabella del consumo di energia pro capite in GJ ordinato secondo valori decrescenti.

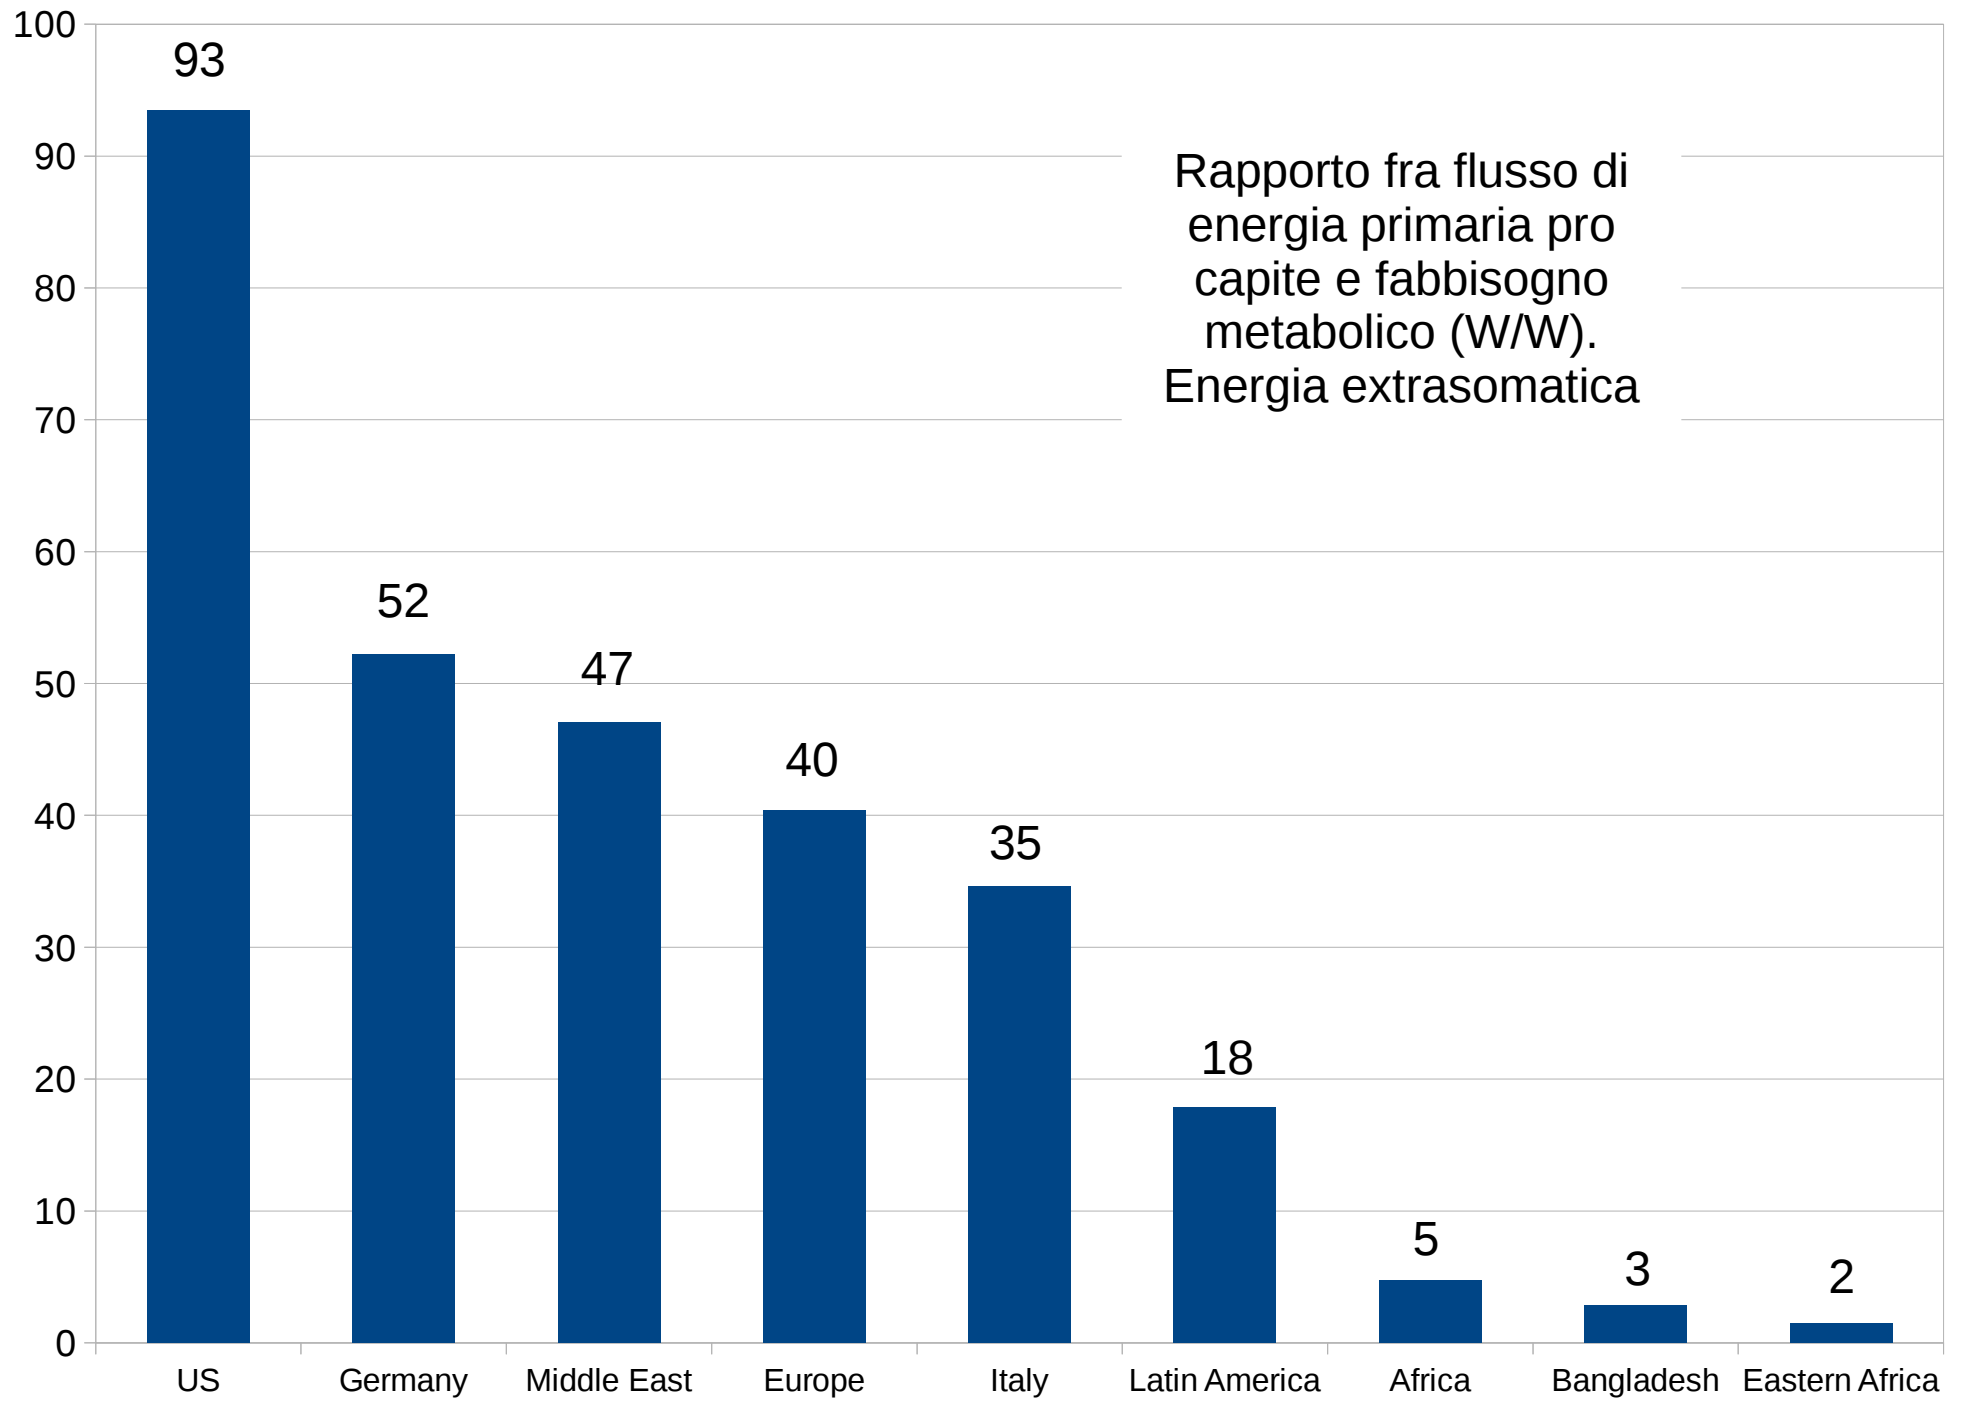

Slide 2: Istogramma dei consumi pro capite in Europa (L'Europa qui è considerata in senso lato come unità geografica escludendo la Russia, ma includendo Ucraina, paesi baltici e Turchia).

Slide 3: Istogramma del rapporto fra il consumo di energia primaria e il fabbisogno energetico del metabolismo umano medio (potenza 100 W).

# Energia primaria pro-capite - Europa

# Distribuzione dell'energia pro capite il salto della Cina.

## Energy per capita: distribution across countries

In 2018, 81% of the global population lived in countries where average energy demand per capita was less than 100 GJ/head, two percentage points more than 20 years ago. However, the share of the global population consuming less than 75 GJ/head declined from 76% in 1998 to 57% last year. Average energy demand per capita in China increased from 17 GJ/head in 1978 to 97 GJ/head in 2018.
