R.A.L. Jones, *Soft Condensed Matter*, Oxford Univ. Press 2002

What is Soft Matter ??

Materials in states of matter that are:

«...neither simple liquids nor crystalline solids...»

... better to give some examples

Single component systems:

Complex liquids, Glasses, Liquid Crystals, Polymers, ... , Proteins, ...

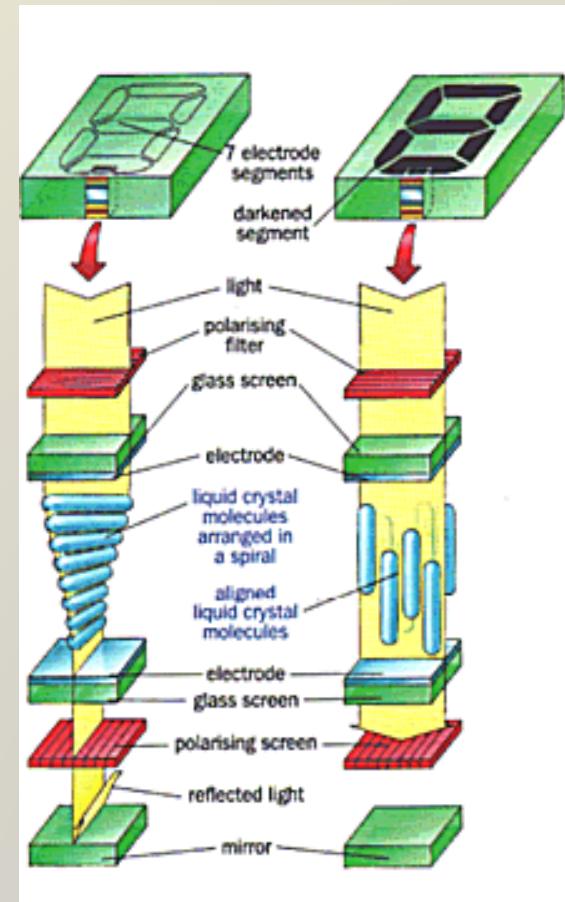

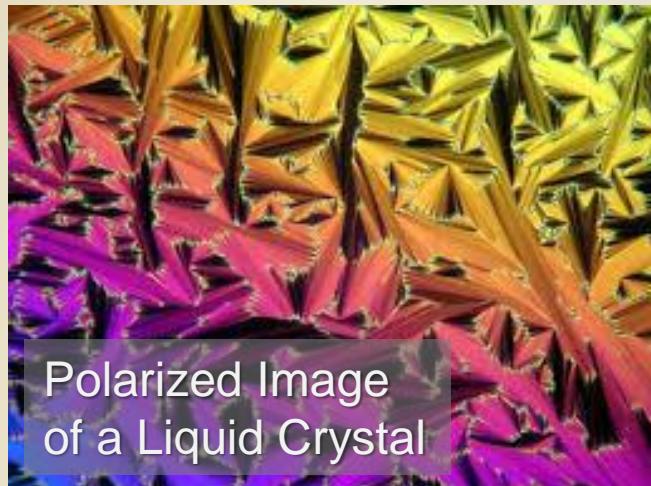

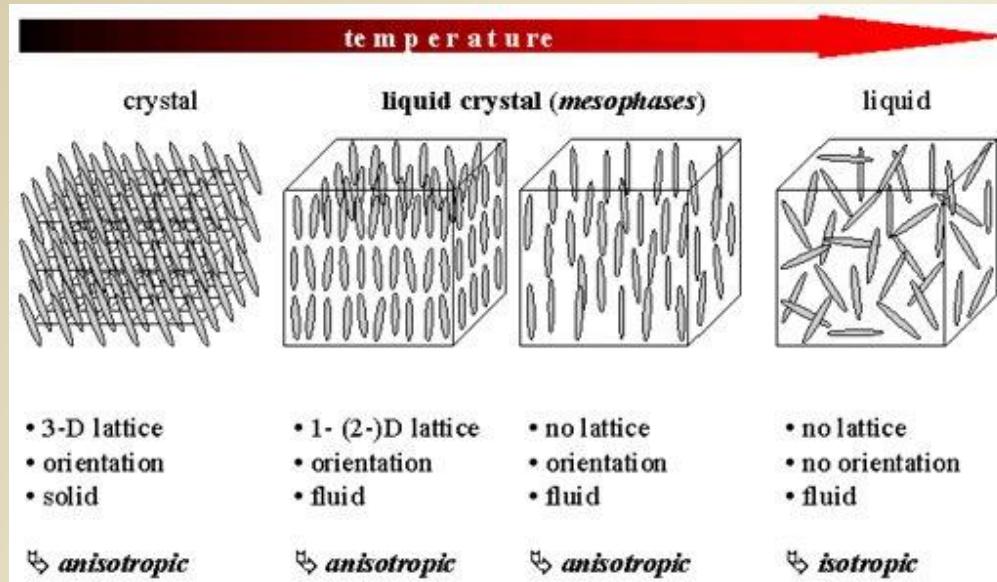

Multiple component systems:

Colloids, Gels, Micelles, ..., Liquid in Nano-Pore, NanoTube Composites, ...

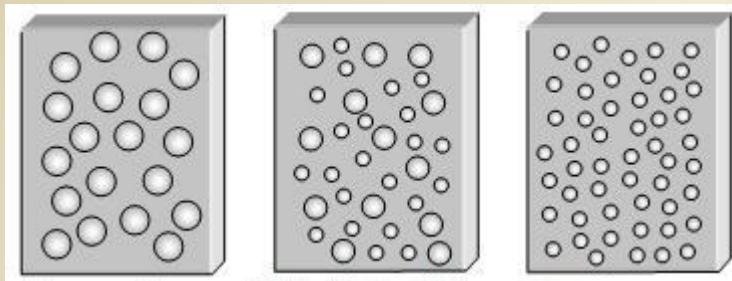

Very complex systems:

Biological Structures, Food and natural structures, ... ,

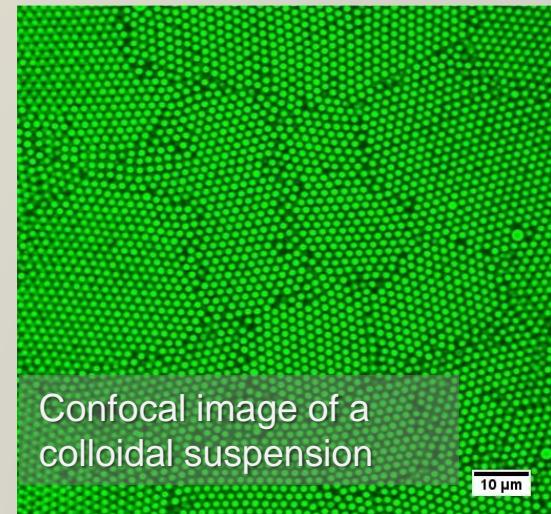

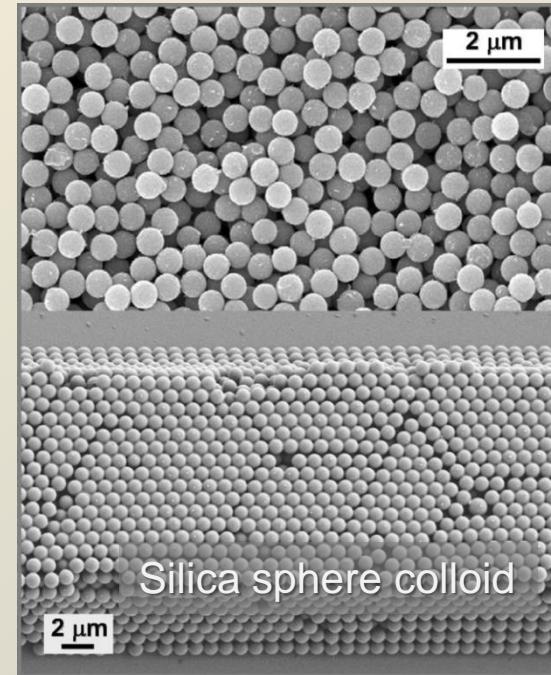

Liquid Crystals

Colloids

Without Asia-China

.... and ITALY

What's the Physic point of view ??

Understanding and modeling of:

« ... *Universal and Common Properties...* »

... either from experiments and theories

Thermodynamics:

Equilibrium vs Non-Equilibrium, Phase Transition , Entropy vs Energy, ... ,

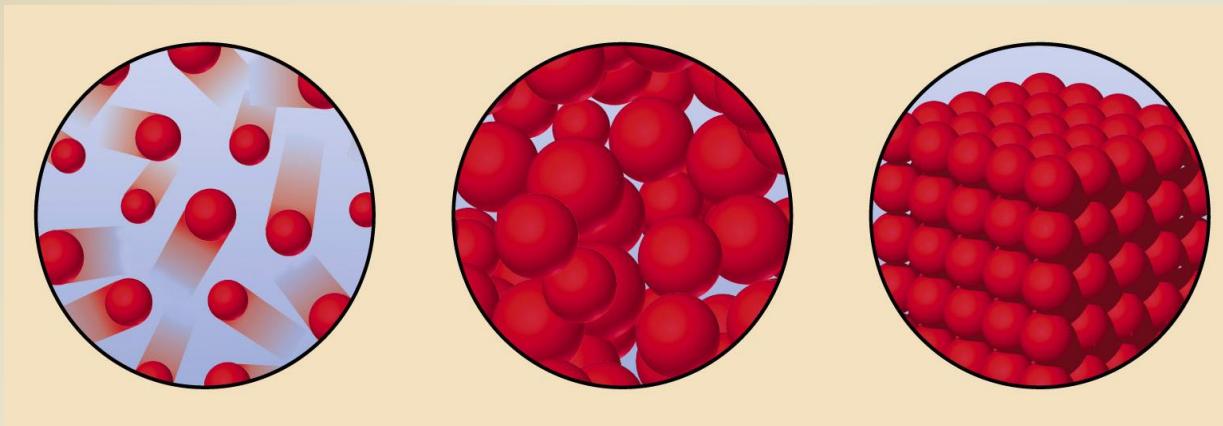

Structure and Topology:

Length Scales, Correlation and Distribution, Assembling, ... ,

Dynamics :

Viscosity vs Elasticity, Transport and Diffusion, Vibrations , ...

Energy vs Potential

Kinetic Energy

$$E_c = \frac{1}{2} m v^2$$

High Temperature

Low Temperature

Intermediate Temp.

vs

Potential Energy

$$E_p = V(r_g)$$

$$E_c >> E_p$$

$$E_c << E_p$$

$$E_c \sim E_p$$

Gas phase

Crystal/Solid phase

Liquid and Soft Matter

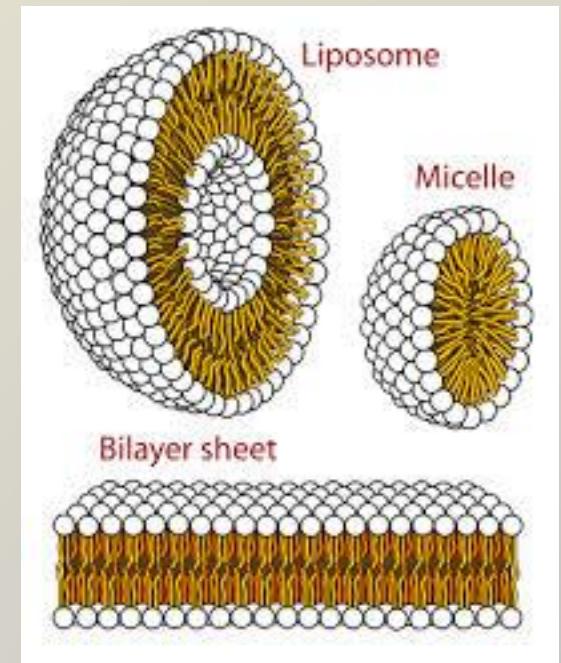

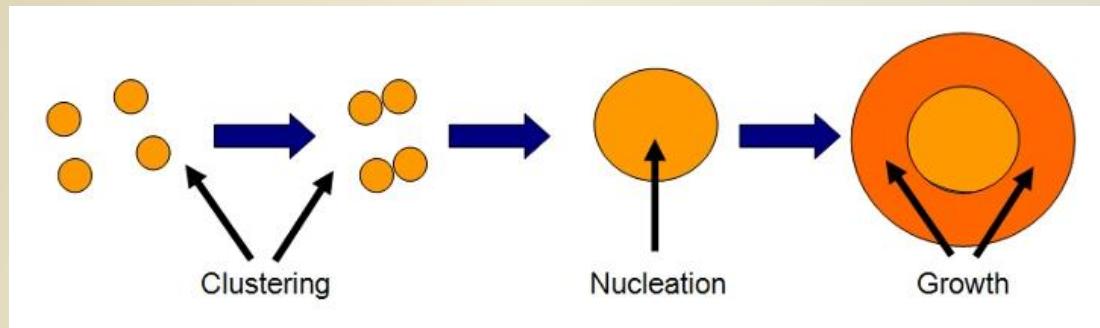

$$E_c \sim E_p$$

Structure and Dynamics

Intermolecular forces try to keep a stable structure.

The kinetic energy makes the molecules moving.

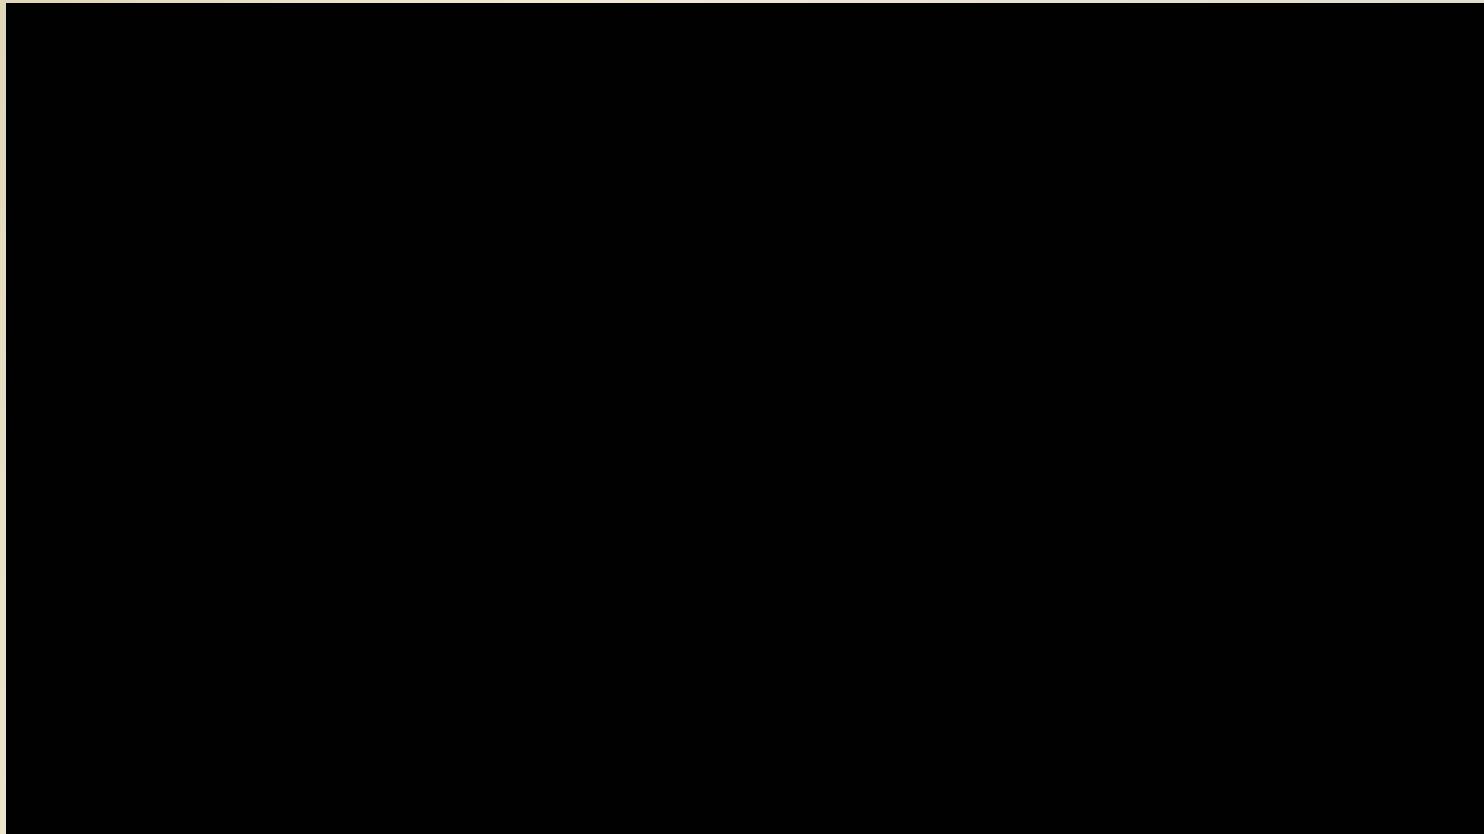

The balance between these generates a plethora of meso-phases and soft matter systems, as well as it regulates Nucleation and Self-Assembly

The time-scale of structure modifications is a key parameter, named the Relaxation Time.

Strange Phenomena in Soft Matter

Non-Newtonian Fluids: Shear Thickening

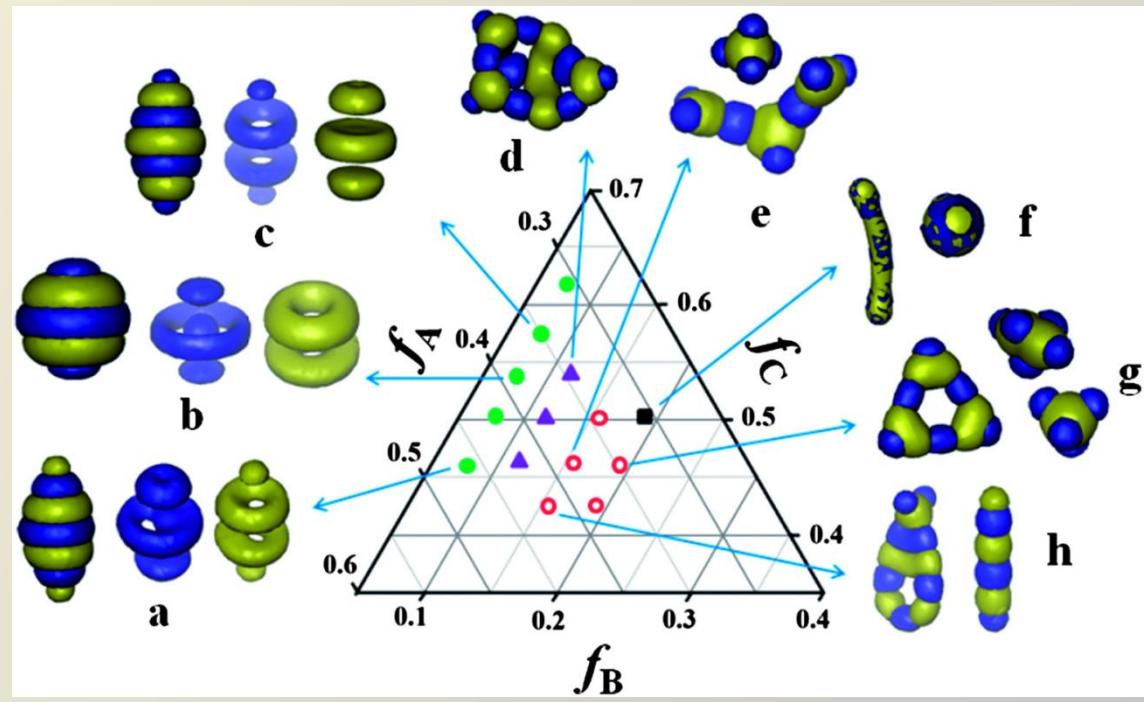

www.youtube.com/watch?v=bLiNHqwgWaQ

$E_c \sim E_p$

Equilibrium vs Non-Equilibrium

Soft matter systems are presenting complex equilibrium phase diagrams reach of phase transitions.

They are prone to show long lived a relatively stable non-equilibrium state.

micelle formation by self-assembly of star polymer in dilute solution
