

Gel

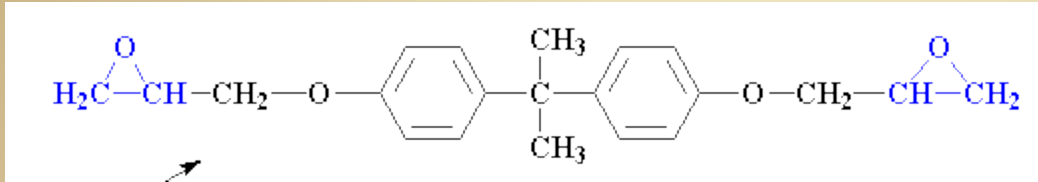

<https://www.youtube.com/watch?v=k3KbefYdZE4>

È un polimero cross-linked che forma facilmente legami Idrogeno

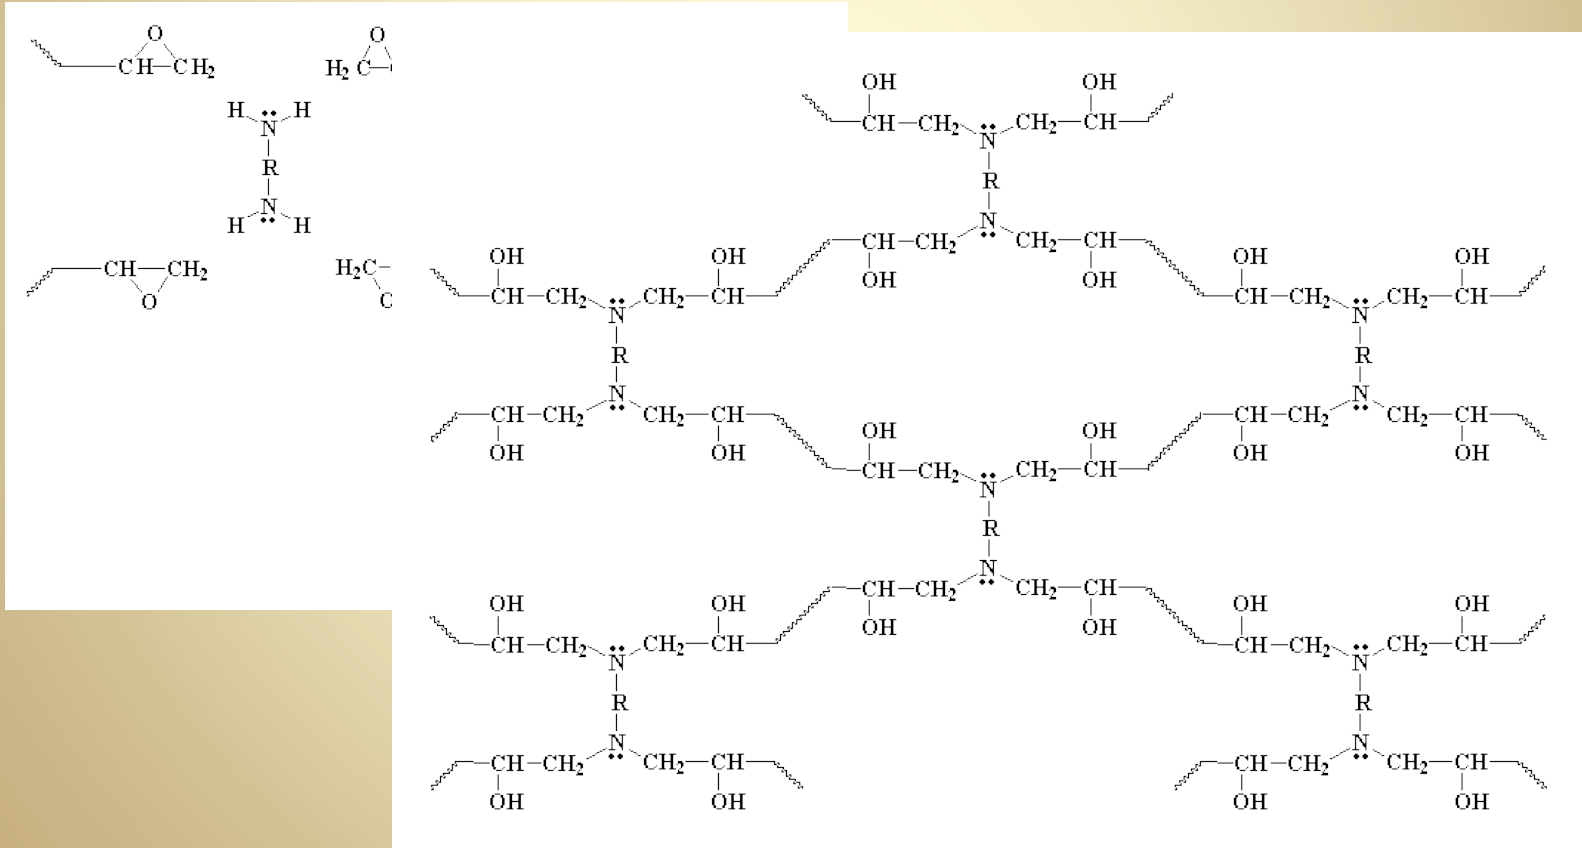

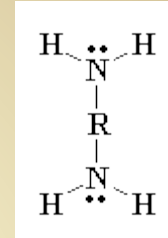

Super Absorbent Polymer

resina

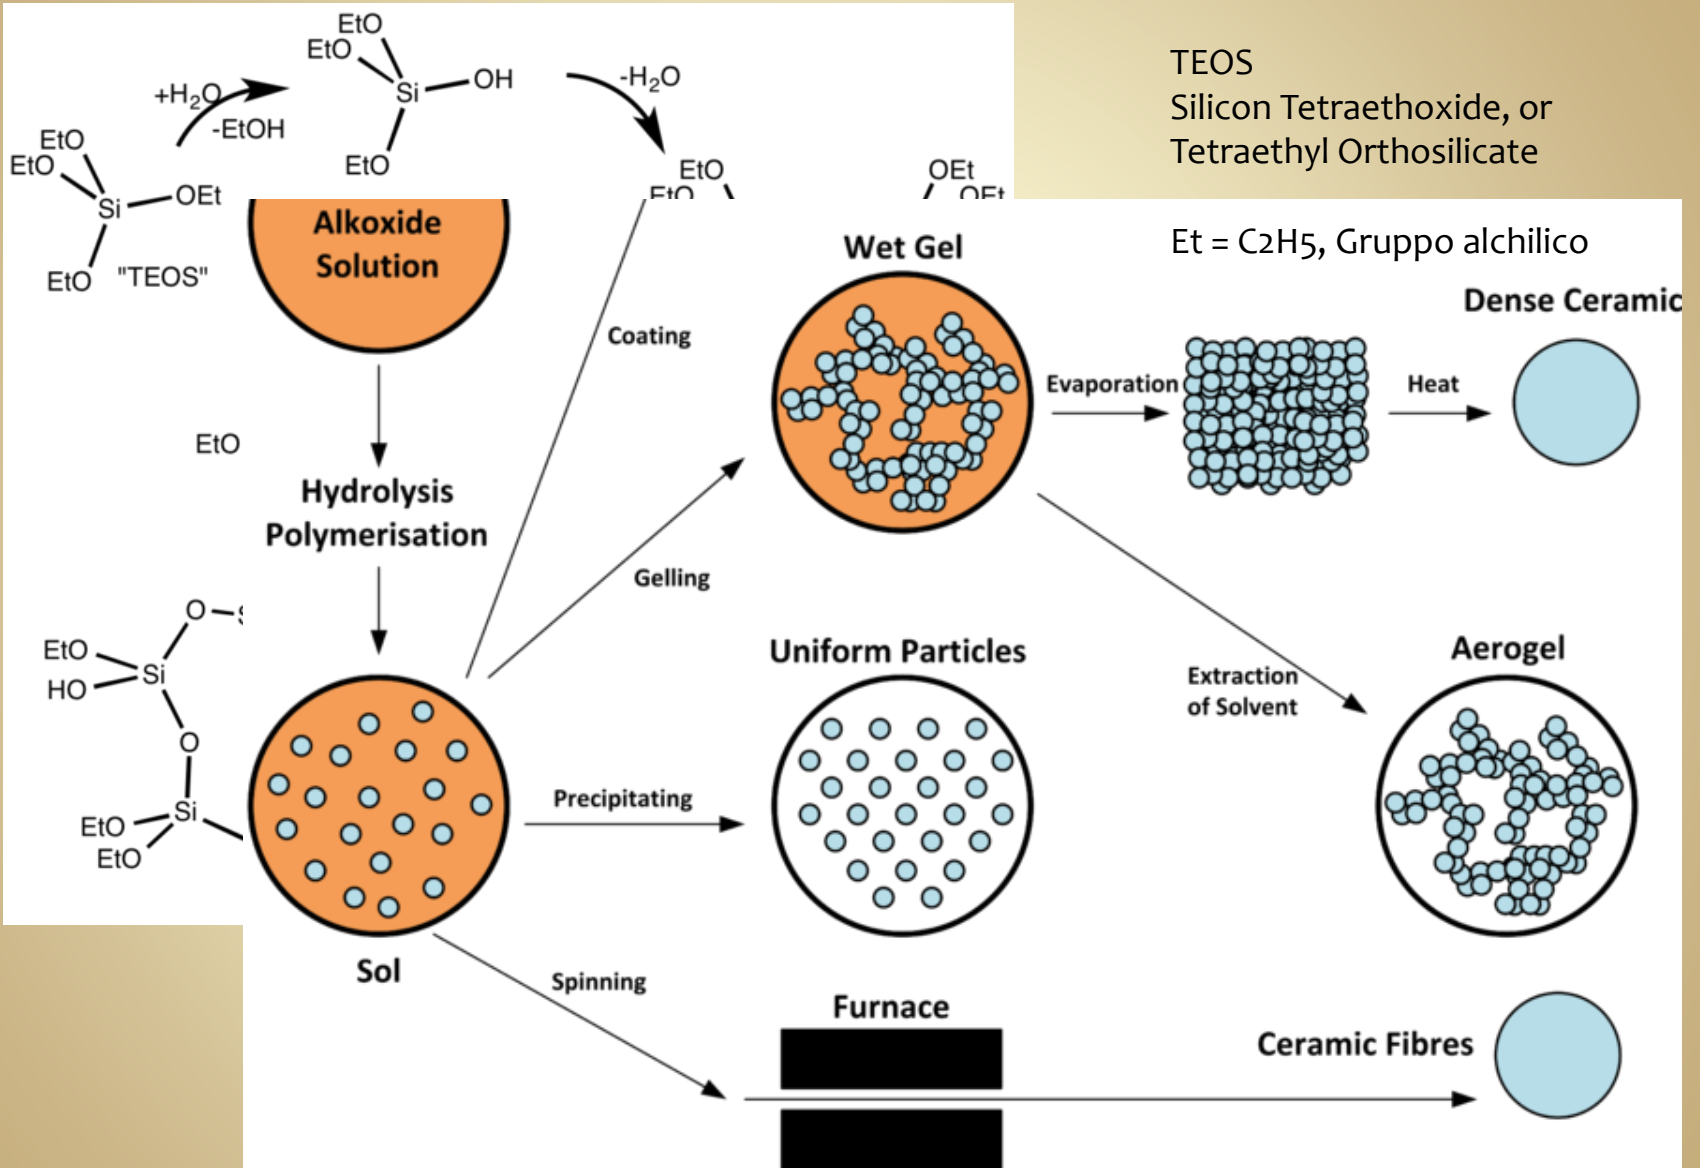

indurente

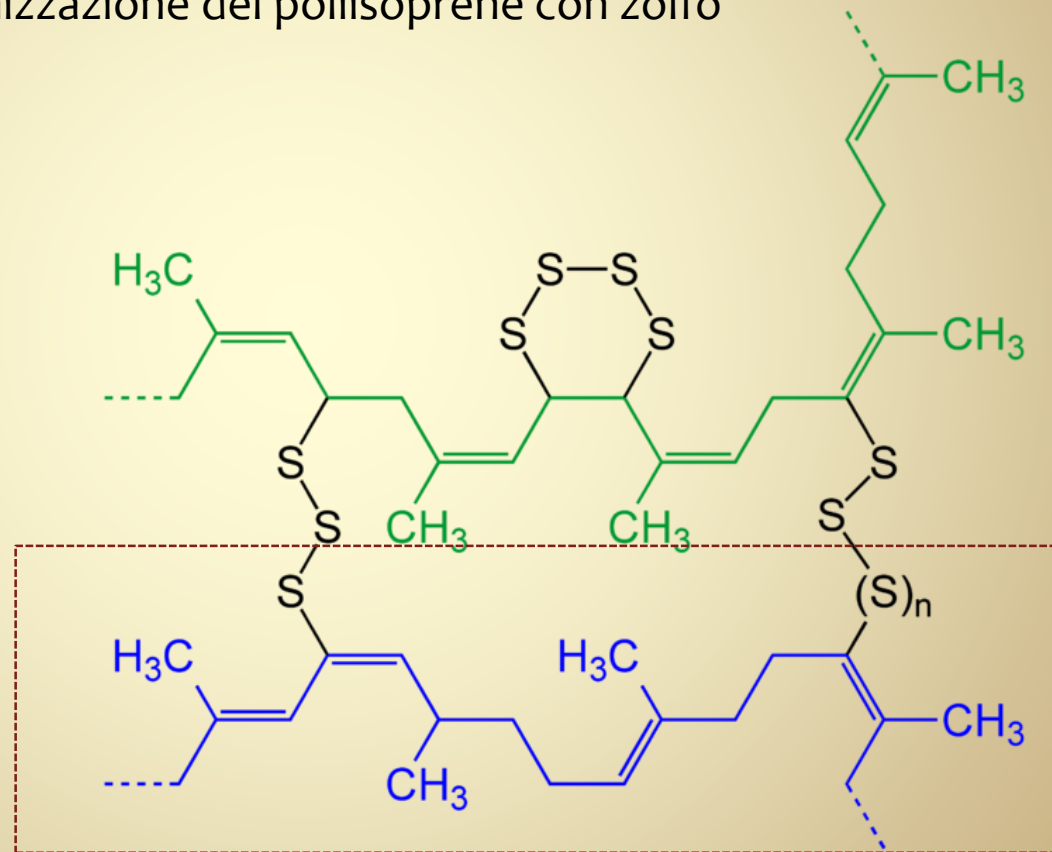

Gel Chimici

Vetri Sol-gel

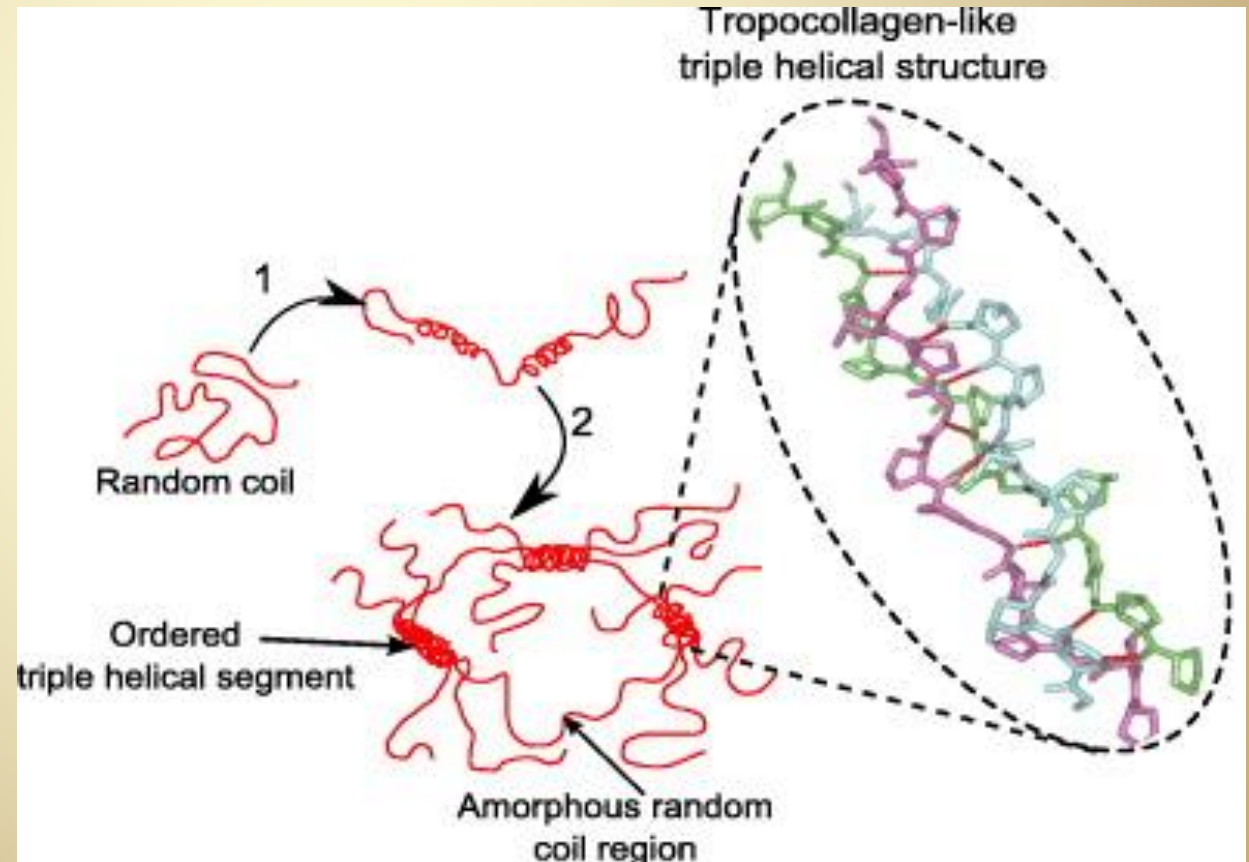

Elastomeri Termoindurenti

Processo di vulcanizzazione del poliisoprene con zolfo

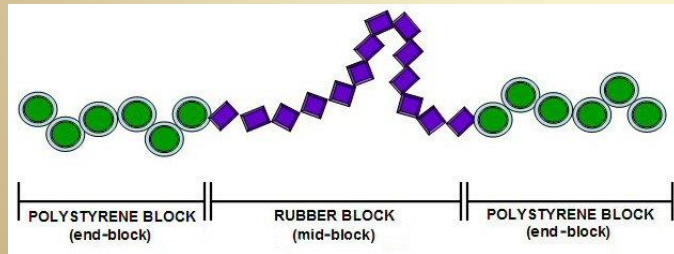

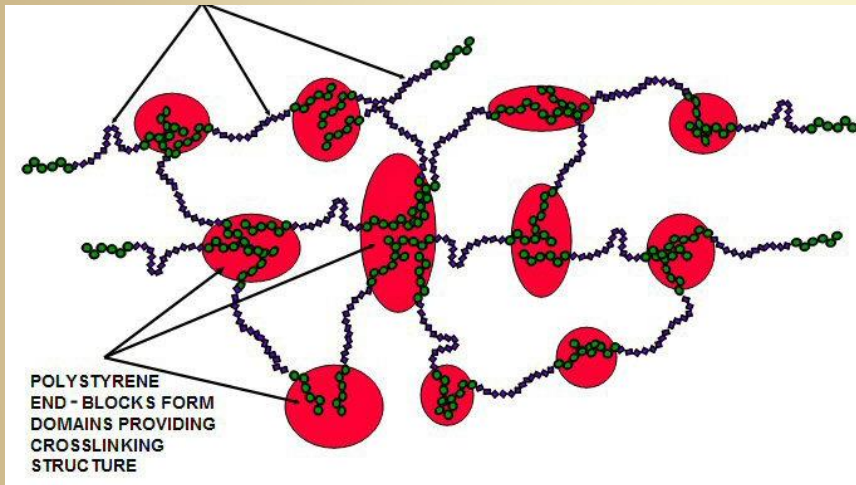

Formazione di micro-zone quasi-cristalline che formano i cross-links

Processo di link delle proteine di collagene

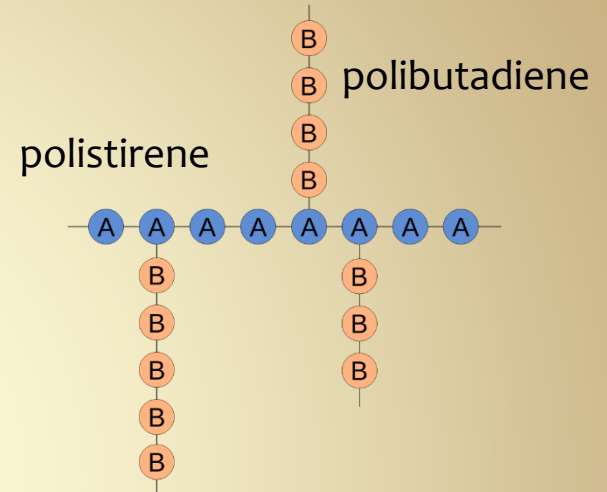

Formazione di micro-domini per separazione di fase che formano i cross-links

Processo di link nei polimeri a blocchi

Elastomeri Termoplastici

High Impact PolyStyrene
