Other Site Characteristics

Area collinare accidentata con dirupi (balze) e calanchi argillosi e sabbiosi nella parte settentrionale, più dolce e con bianche nella parte meridionale.

4.2 Quality and importance

La vegetazione dell'area presenta alcune caratteristiche di peculiarità quali formazioni pioniere di *Artemisia caerulescens* ssp. *cretacea*. Da segnalare inoltre popolazioni di *Arundo pliniana* al limite settentrionale dell'areale. L'area è di grande importanza per la presenza accertata di *Canis lupus* e per la conservazione di specie ornitiche rare o minacciate legate ad habitat steppici naturali o semi-naturali; in particolare, di notevole interesse le popolazioni nidificanti di *Burhinus oediceus*, *Lanius senator* e *Lanius minor*; fra le numerose

specie di rapaci presenti sono da segnalare *Circus pygargus*, *Circaetus gallicus* e presumibilmente *Falco biarmicus*, rarissimo in Toscana. Fra gli Anfibi sono presenti il *Triturus carnifex*, specie endemica italiana e la *Bombina pachypus*, specie endemica dell'Italia peninsulare.
